

## Equipment hire is also part of our service, we hire to others regularly

Although it is a regular occurrence, we may not be known as one of the regions hirers of equipment for the business of tree surgery. However, it is something we do regularly.

### The project

Tree surgery is a busy industry, and although Elite Trees are probably one of the largest organisations of its type in the region, we also partner with many other people in our profession. Equipment hire is very typical of this.

Elite owns a very large array of professional equipment from access cranes/platforms through to stump grinders. This particular local Tree Surgeon had a project in Ipswich to carry out. They called us as they have done numerous times before to hire our tracked wood chipper for a particular project that required this specialist piece of equipment.

We are always very happy to oblige in the hire of equipment as long as the hirer is qualified to use the equipment. If not we do partner with other organisations to provide that expertise as part of a potentially larger project. So with Elite, we hire equipment and operators where needed.

### The outcome

The Tree Surgery community locally consists of many companies with a varying degree of equipment at their disposal. With our extensive arsenal of equipment it is always great to be able to support and work with our colleagues locally by supplying high quality equipment and professionals where needed.
