

Suffolk based equestrian facility gets a brand-new post and rail fence

As we are very much known in the region for our tree surgery services, it is not always common knowledge that we do and have erected a great deal of domestic and farm fencing. Indeed, we have constructed a huge variety of fencing projects over more than 20 years.

The project

This project involved the removal of a tired and worn out fence from a Suffolk based equestrian centre. The fencing must have been at least 20-years old, and although lasted well, it had certainly seen better days. The owner was a regular customer, and we'd been looking after the trees for many years. They hadn't realised we also provided fencing services until they visited our website.

We visited first to assess the size of the project and materials needed, then produced a quotation for the work. It was a good few day's work for our experienced team. A price and date were agreed, and we scheduled in for two days of hard work in the spring sunshine to deliver a brand-new equestrian post and rail fence for this established and respected facility.

Access to the site wasn't difficult, and we were able to store materials safely away from visitors and prying eyes. To last another 20 years, the quality of the post and rail timber has to be good, so supplied the very best materials. Our team set to work, and we will be able to remove the existing fencing infrastructure in quick time, and with the use of specialist equipment, we had the new fencing up in no time at all.

The outcome

The client was thrilled, and now looking forward to the chance to reopen the facility to the public, hopefully in the summer. It will allow many couped up children to enjoy the outside space and meet up with their favourite horse once again — a positive project with a much-needed outcome.
