

Tree dismantling services in Ipswich, dismantling of Conifer trees

Dismantling a tree is a very regular occurrence for the team at Elite trees. This particular project required a necessary level of caution with our equipment because of the narrow access point we were presented with.

The project

Unfortunately, these particular trees not only looked unpleasant but also were taking up over 12 feet in the back garden of the client's house, which in turn was restricting the sunlight penetrating into the neighbouring gardens.

We dismantled the tree to stump level and made sure to take extra care of the surrounding houses, fences and neighbouring gardens. The team then safely carried the debris through the narrow access point and disposed of it correctly before grinding down the stump to ground level.

Using our chain saws, vehicle chipper and stump grinder we were able to safely dismantle the tree and grind the stump down to ground level so the client could have the area re-fenced and landscaped.

The outcome

We had the right equipment to tackle the narrow access space we were faced with and the team took extra care on this particular project due to the surrounding neighbours gardens, our team management skills came into force, and something that is second nature to us at Elite trees. The outcome was unpleasant, overgrown Conifer trees removed and dismantled ready for the area to be landscaped and re-fenced.
